

## Lesson 1

# Malia Recycles

## – solve the problem

### Decomposition

Break it down:

.....

.....

.....

.....

.....

### Abstraction

What's important?

.....

.....

What doesn't matter?

.....

.....

### Pattern Recognition

Patterns:

.....

.....

.....

.....

.....

### Algorithmic Thinking

Step by step:

.....

.....

.....

.....

.....

## Lesson 1

# STEM Club

## How could AI transform your life?

**In a team, think of all the important things you and your family needs to do each day, week or month.**

- Write a list or create a concept map! Identify five things you'd most like AI to make easier or better. What problems could AI solve?
- Expand your ideas to explain how you think this might work. (You could use Computational Thinking to help you!)
- What difference would your AI ideas make? Explain how your life would be better, and how you'd use your extra time to do something good.

## Harnessing the power of Alexa

**Imagine that you have a voice assistant available at all times!**

- What other devices might Alexa control, at home, school or in a work environment?
- Create a slide or poster to show what a voice controlled future might be like.
- How will it change how we live?
- How might life be easier and better?

## Lesson 2

# Computational thinking

The intent for our new Alexa skill is: .....

Break it down:

.....

.....

.....

.....

.....

What's important?

.....

.....

What doesn't matter?

.....

.....

Patterns:

.....

.....

.....

.....

.....

Step by step:

.....

.....

.....

.....

.....

## Lesson 2

# Get ready to code

**Our intent is to:**

.....

.....

.....

.....

.....

**Our invocation will be:**

.....

.....

.....

.....

.....

**The utterances we need to include are:**

.....

.....

.....

.....

.....

.....

**The steps we need to code are:**

.....

.....

.....

.....

.....

.....

## Lesson 2

# Could I work in AI?

**If you've found AI interesting, perhaps a career in AI might be for you! Here are some research questions you could use in an internet search:**

- What industries can AI professionals work in?
- What skills or qualifications do you need for a career in AI?

**If you find a role that's interesting, try using these questions to find out more:**

- How do you get into the role?
- What skills and qualifications will you need?
- What will you do every day in this role?
- How might you progress in this role?
- Where can you find educational courses or apprenticeships to get into this role?

## Useful websites for your research:

- <https://nationalcareers.service.gov.uk/search-results?searchTerm=artificial+intelligence>
- <https://www.prospects.ac.uk/careers-advice/what-can-i-do-with-my-degree/computer-science> (note, this page lists various careers that a Computer Science degree can lead to, many of which are not in AI, but some are)
